

Project Demo Planning

Date	15 March 2026
Team ID	SWTID-2026-9452
Project Name	Credit Card Approval Prediction Using Machine Learning
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.N o	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Explain how manual credit card application review is slow and error-prone, and introduce the ML-based automated approval solution	2	Mohammad Ayesha
2	Solution Architecture Overview	Walk through the Presentation, Application, and Data layers: Flask web app, ML core logic, and IBM Watson ML integration	2	Mohammad Ayesha
3	Data Preprocessing & Feature Engineering	Show the dataset, cleaning steps, and how multi-class payment status codes are converted into binary risk labels	3	Ponnuru JayaSri
4	Model Training & Comparison	Present accuracy/performance results for Logistic Regression, Random Forest, XGBoost, and Decision Tree, and explain why the best model was chosen	3	Ponnuru JayaSri
5	Live Flask Web App Demo	Enter a sample applicant's financial and demographic details into the web app and show the instant approval/rejection prediction	4	Shaik Arif
6	IBM Watson ML Deployment & Q&A;	Demonstrate the cloud-hosted real-time prediction via IBM Watson Machine Learning and open the floor for questions	3	Shaik Arif / All Members

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Highlight the inefficiency of manual credit card application screening and set up why an ML-based approach is needed
2	Solution Overview	Summarize the architecture: Flask front end, four candidate ML models, and IBM Watson ML cloud deployment for scalable predictions
3	Live Feature Demonstration	Enter applicant details in the web app and show the real-time approve/reject prediction, including a high-risk applicant example
4	Q&A; Session	Address questions on model choice, feature engineering decisions (binary risk labels), and the cloud deployment approach
